SCIENTIFIC WRITING AND PUBLICATION

Taught by
Tropical Biology Association (TBA)

EMPOWERING CONSERVATIONISTS

This course will help conservation scientists communicate the importance and impact of their work to the wider scientific community. You will gain all the essential skills and know-how you need to publish a scientific paper and raise your profile professionally. Our teaching draws on twenty years experience of teaching and is based on our successful online and face to face training workshops. People who have attended our past workshops have been able to publish their work based on the new skills they acquired.

WHY ATTEND?

You will learn skills and publishing know-how that you can apply to your own scientific writing. Publishing research is an important way that the wider community can access useful information that can help shape conservation decisions and future research directions

This dynamic and interactive course combines live teaching sessions with self-paced online learning using TBA's stimulating virtual learning environment. We give one-to-one feedback on your own work and no question is left unanswered.

WHO IS IT FOR?

The course is designed for early career conservationists who would like to publish their work.

To get the most out of the course, you should have already completed some work.

MODULES

Module 1

Publishing your work

Module 2

*Paper structure
& writing skills*

Module 3

*Presenting results
& data*

TROPICAL BIOLOGY ASSOCIATION

Scientific Writing and Publication

**What
you
will
learn**

Publishing your work

Selecting a journal

The submission

Responding to reviewers comments
